Designed to Fit Your Lifestyle

Commitment to Excellence

Pioneer Pole Buildings appreciates your interest in our product. Making a wise and economical decision to design your new building is a goal that our experienced staff takes seriously. We pride ourselves in having the highest quality and strongest buildings in the industry. In addition to the highest quality, we offer a crisp, clean appearance with a variety of color options. This creates the perfect roofing and siding material. A full line of trims and accessories are also available to complete your building project.

Quality for a Lifetime

Our structures are designed for a 90-120 mph wind load depending on the geographic location of the building. Post frame buildings are also exceptional in withstanding earthquakes and hurricanes. The Frontier Panel is 38" wide and provides 36" of coverage. The panels interlock to create an attractive look while providing a weathertight seal.

Unmatched Strength

The Frontier Panel utilizes a duplex system. The complexity of this system employs the highest quality, siliconized polyester paint system in the industry. This system is enhanced by the thickest metal coating (AZ55) in the post frame industry. The Frontier Panel has a metallic coating that is 20% to 64% thicker than the competitors panels which offer substrates of G60 to G90. Along with our paint system, the Frontier Panel utilizes a heat forming process. This process creates a paint system that is more flexible ensuring the painted panel does not have cracks or crazing during the roll-forming process. The Frontier Panel has unmatched rust protection and is also protected on the cut edges with the EVERCURE® CECI® seal. This panel is only available at Pioneer Pole Buildings.

Lifetime Warranty

The Frontier Panel is formulated to deliver ultimate performance. We back that performance with the industry's best warranty. The Frontier Panel has a lifetime warranty which gives you the comfort of knowing your building is built to last a lifetime.
